

KERRY

Leading to Better

SheffCoat™ Enhance

Taste the Possibilities

At Kerry, we are committed to providing our customers with unique solutions to their formulation challenges.

Many OTC drugs, and nutritional supplement tablets, are often coated to provide visually aesthetic properties, that are appealing to the consumer. But what if you could also enhance your tablets' taste, as well as adding an aroma to the bottle that is subtly but pleasantly noticed by the consumer the moment they open the bottle.

Now you can, in one easy coating step.

Kerry's experience in total flavor perception, in-depth understanding of consumer preferences, and extensive film coating experience, has enabled us to create a unique, customizable one-step coating that will enhance consumers perception and experience with your tablet, on a whole new level.

SheffCoat™ Enhance

By combining our knowledge of flavors, aromas, and film coating, we have developed SheffCoat™ Enhance. These unique film coatings, can provide just the right amount of flavor in the coating, while balancing the need for a uniform, homogeneous, and robust film coat around each tablet. SheffCoat™ Enhance can be applied using standard film coating equipment and processes that are well known, and already used industry wide.

Let us enhance your next tablet. Talk to your Kerry representative about receiving a starter kit so you can taste the possibilities.
